LinkedIn, GitHub, Portfolio

Full-stack engineer with two years of commercial TypeScript experience. Built the Clinical Topics feature in React, Next.js and TypeScript at the Royal College of Nursing, and now leads a live platform at Simply Happy: a SvelteKit front end, tRPC APIs on Cloudflare Workers, PostgreSQL and Stripe, tested with Vitest and Playwright in CI. Takes security seriously in day-to-day work: role-based access control on the admin dashboard, verified Stripe webhooks, and a test that fails if guest health data ever reaches an LLM. Uses Claude Code every day and can explain any code it writes. Experienced in remote, written-first collaboration.

Core Competencies

- **TypeScript across the stack**: TypeScript is the strongest skill, used in every role; React, Next.js, SvelteKit, Vue.js, Redux, JavaScript, HTML, CSS and Tailwind CSS.
- **Backend and Data**: tRPC APIs and server code on Cloudflare Workers, PostgreSQL with Drizzle ORM, Supabase and AWS S3; Node.js from a MERN mentorship project and for builds, tests and CI.
- **Payments**: Stripe deposit and final payment flows, webhook verification, settlement and scheduled payment jobs.
- **Security Awareness**: role-based access control; Stripe webhook handling; a read-only LLM assistant with no stored chat history and a test that keeps sensitive health data away from the model.
- **Test-Driven Habits**: unit tests with Vitest and end-to-end tests with Playwright, run in GitHub Actions CI on every pull request.
- **AI-Assisted Development**: builds with Claude Code and Cursor; reviews, questions and explains generated code rather than trusting it.
- **Remote Collaboration**: remote contract for a Portugal-based business, managing work in Linear and shipping through stacked pull requests; documented a React component library in Storybook.

Professional Experience

- **Simply Happy** — **Arcos de Valdevez, Portugal**
  Full Stack Developer — *Aug 2025 - Present*
  - Built a members-only hospitality platform, live in production, handling room bookings, availability, payments, guest communications, and an admin operations dashboard.
  - Built across the full stack with TypeScript: a SvelteKit front end, server code on Cloudflare Workers with Supabase and PostgreSQL, and tRPC APIs in a pnpm monorepo, with Drizzle ORM, AWS S3, and Resend for email.
  - Hired a designer and coordinated Figma-to-code implementation across the project.
  - Wrote unit tests with Vitest and end-to-end tests with Playwright, run in CI via GitHub Actions.
  - Integrated Stripe deposit and final payment flows with a Stripe webhook, settlement code, a scheduled payment job and TOConline invoicing, and built role-based access control for the admin dashboard.
  - Led product development from stakeholder consultation through to implementation, translating business needs into technical solutions.
  - Shipped an LLM-powered admin AI assistant on the live platform. It is read-only: it answers questions about bookings using tool calling across seven fixed lookups, stores no chat history, and has a test that fails if guest health data reaches the model.
  - Used Claude Code and Cursor to build the platform.
  - Used Sentry for error tracking and incident management.
  - Managed delivery in Linear using an Agile workflow, shipping through stacked Git pull requests on GitHub.

- **Royal College of Nursing** — **London, UK**
  Staff Front End Engineer — *Nov 2024 - Sep 2025*
  - Developed and maintained the Clinical Topics feature with React, Next.js and TypeScript, integrated with Sitecore CMS.
  - Developed and documented a reusable React component library in Storybook, based on Figma designs.
  - Contributed to a large-scale frontend rewrite of the RCNi platform using Drupal 10.
  - Built and delivered the Career Frameworks feature for the RCN main site using Sitecore and Vue.js.
  - Built Vue.js components connected to .NET/C# backend services.
  - Debugged and fixed bugs, working closely with QA testers.

- **Developer Pro**
  Front End Developer (mentorship) — *Dec 2023 - May 2024*
  - Implemented data visualisation with charts, graphs, and tables for a cryptocurrency data aggregating app using TypeScript, Charts.js, and Tailwind CSS.
  - Transformed design docs and mock-ups into scalable and maintainable React and Redux web applications with consistent UI/UX.
  - Learned JavaScript fundamentals, TypeScript, React, Redux and Next.js through the mentorship.
  - Gained backend exposure working on a full stack MERN application with Socket.io and MongoDB.

Selected Work and Links

- **Simply Happy**, members-only hospitality platform: simplyhappy.pt; case study at muhammadalikhan.co.uk/work/simply-happy
- **Coin Flow**, cryptocurrency aggregator and tracker: coinflow.netlify.app
- **RCN Career Frameworks**: rcn.org.uk/Professional-Development/Career-Frameworks
- **GitHub**: github.com/Maks6831
- **Portfolio**: muhammadalikhan.co.uk
- **LinkedIn**: linkedin.com/in/muhammad-ali-khan-464b80203

Education

- **University of Reading** — **Reading, UK**
  BSc in Chemistry, 2.1 — *2021*
  Dissertation: study of phonons in cubic perovskites (for solar cells), running simulations on the UK's largest supercomputer.

Languages

- English (native).

Additional Information

- **Right to work**: British citizen.
- **Location**: Slough, UK. Available for hybrid or on-site work in London.
- **Availability**: current role finishes at the end of November 2026.
- **Development tools**: Git, GitHub, GitHub Actions, Linear, Figma, pnpm, Node.js for local development, builds, tests and CI.
- **CMS experience**: Sitecore, Drupal 10.
- **Working style**: most energised by building things and getting them released; thrives in fast-paced environments.
- **Career focus**: learning how to build apps that serve millions of users, and how things work under the hood.
